Cast Aluminum

Turning Hot Coals
and Logs on Fire

- Product description: Kindle Safe Gripper
- **The Solution to Chopping Firewood You Didn't Know You Needed**
- Chopping wood can be a tedious and dangerous job and the risk of injury is high. From splinters, scrapes, and cuts to the potential loss of fingers and an unwanted trip to the emergency room! – when holding wood, chopping is a big commitment.
- Luckily, that's all in the past. The KindleSafe Gripper is the perfect way to make chopping wood precise and pain-free. A completely unique clamp designed to let you stabilize wood in one hand while swinging an axe in the other, cutting firewood – or wood for any other project! – has never been easier. And, with a lifetime warranty on the product, you can guarantee a seamless chopping experience for life.
- **What Is the KindleSafe Gripper?**
- The KindleSafe Gripper is a brand-new way to make cutting wood easy. Instead of gripping wood upright in your hand and bringing your axe down just millimeters from your fingers, the KindleSafe Gripper does the hard part for you. Using the same logic as salad tongs, the KindleSafe Gripper combines handles for leverage with a gripping end, or the "Jaws," that comes complete with teeth along the curved surface to keep wood firmly in place.
- Made from cast aluminum, the KindleSafe Gripper is safe on hot items as well, making it easy to rearrange logs on a fire or in your barbecue pit. Wood size is no

issue either – single piece of wood or bundles of sticks ranging from 1.5 to six inches in size can easily be accommodated.

- Your one-stop solution for gripping wood in any application, nothing beats the KindleSafe Gripper!
